Subject: SetCurrentDirectory()

Hi there,

I find that SetCurrentDirectory() is not found when I try compiling with SVN187 under ubuntu 7.10.

My fix: I write my own dummy SetCurrentDirectory() and it compiles fine.

Next problem: the linker says that SetCurrentDirectory() is already defined.

What's going on?

Also I appear to have a similar problem with plugin/bmp - the linker keeps saying that there are multiple definitions of functions.

Nick
