I am a newbee. Sorry for the basic questions.

If I make a program that calls some old C code from main.cpp in my Ultimate++ program, an get "undefined symbol" link errors.

I wrote test code shows my problem

---------- main.cpp ----------

```
void __cdecl GetHello(char *Text);

Hello::Hello()
{
char HelloText[12];
 CtrlLayout(*this, "Window title");
 GetHello(HelloText);
 lblHello = HelloText;
}

GUI_APP_MAIN
{
 Hello().Run();
}
```

---------- HelloText.c ----------

```
void __cdecl GetHello(char *Text)
{
    strcpy(Text, "Hello, World");
}
```

I have main.c and HellText.c in my package. When I try to compile, I get

1 undefined symbol(s): GetHello(char*)(referenced from.... linking aborted due to fatal errors

If I move the GetHello function to main.cpp, the program compiles without error.

If I rename HelloText.c to HelloText.cpp, the program also compiles without error.

What am I doing wrong???
