Subject: missing features: references etc.

Hi,
Ultimate++ is an impressive piece of work, but what I'm really missing is
a) a function for finding all references of a method
b) an "adding class" wizard that supports me by creating a .cpp as well as a .h-file
c) an "add method" wizard that writes the new method in the appropriate .cpp and .h file.

Is it realistic to dream about realisation?

Regards
max meier
