Subject: Page Totals in a table?

I have a long lasting table (10-20 pages in some cases) on a report. I am wondering how I can detect page changes and insert page totals? Thus far, I have been constructing the table in a StringBuffer as QTF, then at the very end doing:

```
Report r;
r << buf;
Perform(r);
```

This obviously isn't going to work for what I need.
