Subject: Port giFT (a great but abandoned P2P project) to U++?

P2P programs are the most used programs in the world, giFT include support for multiple networks like Gnutella, Ares, FastTrack (dead?), openFT (FastTrack open-source clone), OpenNap, but can include plugins to support any network.
I suggest can be added KAD (Edonkey decentralized network) and DHT/PeerExchange (Bittorrent decentralized network)
Can anyone do this?
That would turn U++ into a very popular.
