In Sqlite2Schema.h DUAL_UNIQUE and UNIQUE_LIST definitions are not for sqlite, I think.
The correct definitions would be:

```
#define DUAL_UNIQUE(k1, k2)       ATTRIBUTE("create unique index DQ_@t$" #k1 #k2 " on @t
"\
                                  "(" #k1 ", " #k2 ");",\
                                  "drop index DQ_@t$" #k1 #k2 ";")

#define UNIQUE_LIST(u, l)         ATTRIBUTE("create unique index DQ_@t$" #u " on @t  "\
                                  "(" l ");",\
                                  "drop index UQ_@t$" #u ";")
```
