Subject: Strange (perhaps) DropList ctrl behaviour

Hello,

I am playing with the reference example SqlArray.
I have modified the schema description, in the lay file added a droplist, and feeded this one with some values

dl.Add(1,"uno");
dl.Add(2,"due");
dl.Add(3,"tre");

Then I connected it to 'detail'

detail.AddCtrl(DL, dl);

When I enter the values it seems to work (the keys of droplist are stored in the table).
But when I click to resume the stored values in the table the droplist remains empty while the others are populated with data.

It looks for me a strange behaviour but I could mistake. Any hint?

Thank you,
Luigi
