Hello,

I have upgraded the WebViewCtrl above. I am using it in production.

Here is a picture of a local html file with hardcoded javascript that show/hide columns. Clicking on the column head will make a sort. The css will prevents the buttons to be printed on paper.
That is an unusual and powerful way for me to show output.

I can inject html ctrl inside the document via RunScript method.

The package is crossplatform. I am using it embedded in a tabbed page.

Luigi
