Hi,

the search field can not get the focus with keyboard shortcuts.

Solution:

file FindReplace.cpp, Line 520

```
void CodeEditor::OpenNormalFindReplace0(bool replace)
{
 if(GetLength() > 1000000)
  findreplace.incremental <<= false;
 findreplace.Setup(replace);
 findreplace.find.SetFocus();                    //  <----- move this line
 findreplace.itext = GetI();
 findreplace.prev.Show();
 findreplace.next <<= THISBACK(DoFind);
 findreplace.close <<= THISBACK(EscapeFindReplace);
 if(!findreplace.IsOpen())
  InsertFrame(FindFrame(sb), findreplace);
 WhenOpenFindReplace();

}
```

moving the line findreplace.find.SetFocus(); to the end of function resolve the probleme.
