Subject: Copy and paste for ArrayCtrl

Hi,

I am wondering if there is an example of implementing copy/paste for ArrayCtrl. I normally use GridCtrl but I have too much data and my app balloons up from 250MB to 2.7GB when I try to display it in GridCtrl. I am thinking to use ArrayCtrl and a virtual array to cut down on memory and increase speed but I am not good at teh clipboard thing.

Thanks,

Nick

EDIT: The best solution would be that Daniel modifies GridCtrl but I will post a subclass of ArrayCtrl in a few day's time.
