Hello,

My OS is Debian/kFreeBSD 7.0.2.

Source packages are downloaded from http://upp.invothink.com/release/pool/main/u/upp/

When I build upp_5485-1~wheezy0 I got some error messages.

Using flags GUI GCC DEBUG DEBUG_FULL GNU/KFREEBSD POSIX

uppsrc/Core/config.h:45:6: error: #error Unknown OS

Could you help me to fix this issue ?

Thanks.
