Subject: is there a TerminalCtrl?

Hello,

do we have a TerminalCtrl? I am afraid we do not have one in which to type command of the current operative system.

My problem is the following. My Upp program is just a driver of a console program. Now I run it calling the Windows method CreateProcess(...). Unfortunately I must call that external program as if I were within a given directory... that I cannot set because there is no terminal
Is there a way to simulate at runtime a sort of

cd C:\some_folder
and then execute the command?

Thanks,
Luigi

PS: this console program is HUGO, a static web generator. I am trying to make a trivial front end with a TreeCtrl and a CodeEditor.

Hello Luigi,

From your description, you seem to be looking for LocalProcess, and its global functions:

https://www.ultimatepp.org/src$Core$AProcess$en-us.html (See the end of the doc. Sys() command may be what you are looking for.)
And
You may want to use it with https://msdn.microsoft.com/en-us/library/windows/desktop/aa365530(v=vs.85).aspx on windows.
Best regards,
Oblivion

Hello Oblivion,

you are right, SetCurrentDirectory(folder_path) did the trick.
Later I'll inquire the localprocess method hoping to gather the output made by the problem.

Thanks and best regards,
Luigi

Yes, the Sys() command is from far much better.

Luigi
