Can someone send me screenshots of how I should configure the compiler of MSC17 to be able to use Mysql?

Setup / Build methods...

Then you have to select the method you are using with MSC and add library path and include path to tabs at the bottom...

(I do not have MYSQL configured right now, so I cannot easily produce screenshots. But if you have further problems with this, let me know, I will install it).

Yes, the question is that I already try, but I keep throwing error in the compilation. and I saw that they have an example using MSC 9, but clearly it is not the same in the case of VS 2017 and that's why I could not do it.

Quoting the error would definitely help..
