Subject: Android port

Hi,

I think that android port is now imminent - all bricks are ready - we can compile for android in theide, we have Core ported and we have new VirtualGui backend which has SDL2 implementation.

I think it should be now quite easy to connect these things and get Android GUI app running, using SDL.

So I am creating this topic for others to start the work :) (I will not be much involved because I am working on macos port meanwhile).

Mirek
