Hello,

I am struggling with some painting issues for some time now.
All I want to do is to have some transparent widgets or widgets dislaying a background image with aplha in order to see the Topwindow background

Everything is drawn well on start and when resizing but when I hover over a widget THAT IS DISPLAYED over an alpha image, then some glitches appear.
The same happens when I refresh the layout
It looks like the Topwindow background is not redrawn as it should be.

I uploaded a test case:
* just hover over the option in the tab ==> option glitch appears
* Change selected row inside Grid : call Refresh() of the tab ==> whole background is glitch !
* Once glitch is present, just change tab or resize window and everything comes back to normal

How can I correct this ?
