Running theide in release mode (SVN229 - Uvs 2538) on ubuntu hardy gives memory violation error.

Running in debug mode, it stops at an assert in MultiButton.cpp, line 512 :

```
MultiButton::SubButton& MultiButton::MainButton()
```

```
{  
  for(int i = 0; i < button.GetCount(); i++)  
    if(button[i].main)  
      return button[i];  
  NEVER();           <== HERE  
  return button[0];  
}
```

Removing the assert (just for test) it gives assertion failed in Core/Vcont.h, line 17.

The bug appears with each optimization level, so it shouldn't be compiler related.

Ciao

Max
