Subject: StdFont(11) in DocEdit and LineEdit

Hi,

I have a DocEdit and a LineEdit in a lay file. The font is StdFont(11) for both.

When I load a text file into both controls, the font type displayed in DocEdit is different from that in LineEdit.

Is this the intended design or am I missing something here?

Thanks in advance for any ideas or suggestions.

Best Regards,
Yeoh
