I don't think that a forum is the ideal solution for bug tracking because IMHO you don't have a clear view of everything what is going on.

luzr... And usual scenario is more like "question in the forum" -> "testcase requested" (and then either bug found in testcase or bug found in U++ ...

I think the forum is still a very good place to ask questions about how to use U++. The bug tracker would be there to report bugs and request features and not to ask questions.

I took a look trough a few bug tracking apps that I found that a are PHP based, and I think <http://flyspray.org/> really looks great.
