Hi,

After i run the HttpServer example (reference Assembly) and when I close the window the application show 20 lines of memory leak!

If i put Server.Close() in line 30 (HttpServer) it displays error Assertion failed in (...\Core\Socket.cpp, line 382)
ls.IsOpen()

I don't know if there was carelessness in the example when shutting down the server or if this should be corrected!

Thanks!
