Subject: How to set the ***initial*** focus to an option?

I have a ParentCtrl and on it, at the top position, an Option. Below that is a Label and an EditField.

When the application starts, the EditField has the focus.

I would like the Option to have the focus, but I don't know how. "SetFocus()" doesn't work in the constructor.

Surprisingly, "SetFocus()" works well, when I move the focus later on ("OnKey()").

How can I set the focus to the (topmost) option, when the application starts?

Werner
