Subject: Using U++ IDE to compile a Qt application

Hi there,
I'm looking for an open source CAD application and found one that suits my needs: OpenScad (https://www.openscad.org/about.html). I'm planning to tweak a little bit some feature, so I need to download and compile it on Windows platform. It has been developed using Qt, so easiest solution would be downloading Qt-Creator, but I'm accustomed with U++, so I'm wondering if it's possible to use it to build my own version of OpenScad.

Anyone has had previous experience on compiling a Qt application with U++?

Bye,
gio
