if I configure the report margin, the way below I can't get results
as the image in the attached file
depending on the code below

```
Report r;

r.Margins(100,100);

String s = "myTextReport";

r << s;
```

How should I do?

thanks!

within the same question, how do I set a margin for a table? (following the code below)

```
        String tab;
 tab << "{{1:1:1:1:1:1:4 A:: B:: C:: D:: E:: F:: G (wider)";
 for(int row = 0; row < 10; row++)
  for(int column = 0; column < 7; column++)
   tab << ":: " << row << ":" << column;
 r << tab;
```

note: I saw in the U ++ document that a margin should be "<number", but if you put it in the example above as
"{{<200 1:1:1:1:1:1:4 A:: B:: C:: D:: E:: F:: G (wider)"

generates inconsistency!

How do I do?

thanks

If you plan on directly writing QTF, then use the QTF desognor to help you (it is embeded in

Theide)

ok, even with the QTF designer "facilitator" I can't get the margins questioned! The question involves knowledge about the definition of margin and is not in any of the examples offered.

Ok! now i understando about QTF designer, and how
explore the issue via the "editor" button where I clear everything and draw a
table considering the desired margin.

It worked, thank you for your attention!

Thanks

Merry Christmas!
