Good afternoon!
I can't figure out how to add a column from a database table. For example , we have tables:

```
TABLE_(table1)
   SERIAL_ (tb1_id)
   STRING_ (name)
   STRING_ (last_name)
   END_TABLE
TABLE_(table2)
   SERIAL_ (tb2_id)
   INT_ (tb2_tb1_id) REFERENCES(table1)
   STRING_ (book)
   STRING_ (description)
   END_TABLE
```

And I need to display the table:

```
-------------------------------------
|book | description| name| last_name|
-------------------------------------
```

Good afternoon!
I faced a similar problem, but also did not find a solution.
