Quite often I encounter JSON or XML "oneliner" files (without nice formatting or even line breaks). That is not a problem when you are displaying these with build-in theide JSON/XML viewers, but sometimes you would prefer to work with them as text.

To solve that, theide got a nice simple function - you can now reformat xml/json file (or just selection) into "nice" text. Two operations are in "Adnvanced" edit menu.

Yes !!
This can come in very handy
Thanks
