How to display fields from different tables in one SQLArray.

Are there any analog View-Join

There are 2 tables:

```
TABLE_(PROJECT)
INT_ (PR_ID) PRIMARY_KEY AUTO_INCREMENT
INT_ (PR_CREATIONDATE)
INT_ (PR_USERID)
INT_ (PR_COMPANYID)
STRING_ (PR_TASKTODO,2000)
DOUBLE_ (PR_SUM)
INT_ (PR_PLANNEDDELIVERYDATE)
DOUBLE_ (PR_SUMFACT)
INT_ (PR_STATUS)
INT_ (PR_PAYSTATUS)
INT_ (PR_PLANNEDEXECUTIONTIME)
STRING_ (PR_COMMENT,2000)
END_TABLE
```

and

```
TABLE_(COMPANY)
INT_ (COM_ID) PRIMARY_KEY AUTO_INCREMENT
INT_ (COM_GROUPID)
STRING_ (COM_NAME,2000)
STRING_ (COM_INN,2000)
STRING_ (COM_KPP,2000)
STRING_ (COM_ADDRESSDOC,2000)
STRING_ (COM_ADDRESSFACT,2000)
STRING_ (COM_COMMENT,2000)
END_TABLE
```

They relate by field PR\_COMPANYID

I need to display the first table, and instead of field PR\_COMPANYID I need to display COM\_NAME from second table. I found 2 solutions. First - do Join View on the SQL server. Second - do converter to display the column in the table. I think that there should be a 3rd - Correct.

Please Give the right decision.
