Hi,

As part of our ongoing effort to strengthen and improve Upp's support for cryptographic functionality, the SecureZero and SecureBuffer primitives have been added to the Core/SSL package.
You can find more details in the following pull request:
https://github.com/ultimatepp/ultimatepp/pull/272

The next step will be to add cryptographic SecureRandom and SecureNonce functions. See:
https://github.com/ultimatepp/ultimatepp/pull/270

Best regards,
Oblivion
