Is there anybody out there trying to run upp on FreeBSD 4.x?
Because a build error occurs on these systems using the port I submitted.

The error report can be found on:

http://portsmon.freebsd.org/portoverview.py?category=devel&a mp;portname=upp602

It seems that there is stdint.h missing on these systems, but inttypes.h is available instead.
Is that right?

Matthias

Shouldn't this topic be in "Compiling ..." category or (Edit:) better "installation and running"?
"Problems and discussion about installation and running under different OS..."?

Yes, you are totally right. I think the "Compiling ..." category is the most appropriate.
I am sorry about that.

Matthias

No problem at all! It's easy to move.
Edit: But I'm moving to "installation and running under different OS" then Mirek can decide...
