I have been reading throught the code and it seems like there is no way to switch of the resizing of the tabs withing HeaderCtrl or did i overlook something?

Thanks for your help,
Bas

thanks Mirek;

Are there also functions to ...

* move Tabs around eg MoveTab(int currentPos, int newPos)
* delete a Tab eg DeleteTab(int PositionOfTab)

I only found a way to hide given tabs.

Thanks a lot, Bas

No. If you need to change the layout, just clear the tab and start again... (Clear, Add).

What exactly you want to achieve?

I am wirting a "DiaryCtrl" and use HeaderCtrl to set the days or tasks (eg personal/business) using the Diary/Organizer and i want to be able to change the order of ther tasks.

in the picture it would be flip eg column one and two.

I think this is quite typical situation where you should go for "recreating" (but I can be wrong...).

Mirek
