Well, this one actually I need for my customer But would be nice to have as package too.

Anybody has experiences with scanners (twain)? I need to add scanner support to one of my applications...

Mirek

What do you mean by experience?

We used Dosadi's eztwain in a few apps (find it here: http://www.dosadi.com/pub/eztw1.zip includes source code) and for a more demanding application we purchased a control from http://www.pegasusimaging.com

They both served their purpose and are still working great.

Usually people are asking for the following:

1) Grab a photo of my customer/employee and store it in the database or print it on his membership card
2) Scan a document using a simple scanner and save it as tif or jpg,png sometimes using encryption
3) Scan multiple documents using ADF scanner modules and save it either as tif or multiple jpegs.

Hope this helps.
