Hello,

I would like to zip all files in a given directory and save the archived .zip. Unfortunately the reference case does not help me :blush: . This is my experiment

```
 FileZip zip(TD.PATHDIRWWW+"compress.zip");
       String targetdir = TD.PATHDIRWWW;
 FindFile fff(AppendFileName(targetdir, "*.*"));
 while(fff) {
   if(fff.IsFile()) {
    zip.WriteFile(LoadFile(fff.GetName()), fff.GetName());
   }
   fff.Next();
 }
 zip.Finish();
```

But produces a zipped archive with empty files. Of course I am using the wrong zip method. Which the correct one?
Thanks,
Luigi

I found the mistake 8)

The correct line was

```
   zip.WriteFile(LoadFile(TD.PATHDIRWWW+fff.GetName()), fff.GetName());
```

without the path it was impossible to load the right file.
Luigi

...or, BTW, you can also use fff.GetPath() there....
