I think HasFocus() should return true for control with opened popuped widnow. For example if DateTimeCtrl/DropList is embeded in arrayctrl and you open calendar/item list the color of active array row become different (unfocused). This is wrong and very annoying for user.
I think the best solution is to make HasFocus virtual and let the user define returned value in more complicated cases.

If you're talking about making HasFocusDeep virtual I still think HasFocus is a better choice. Once you get it the HasFocusDeep will be automaticaly also working properly.

No, I was just speaking about makeing it return 'true' if widget owns an active popup

This makes sense as you have to use HasFocusDeep there anyway (because it is "embedded" widget that has in fact the focus).
