Is anyone using/seen a text link used on a dialog/layout?
(As I've used in VS with a library/OCX)

Clicking the link would open the default web browser to the coded URL.

Also, a Text link to open another dialog/window of the project would be of interest.
Syntax & example lines appreciated.

No discussion found in searches.

Perhaps easiest way is to use RichTextCtrl, then assign QTF like

"[g^www.space.com^ link"

in the code.
