Subject: TheIDE 602 Fedora Gnome [BUGS][FIXED]

Hi,

I'm using the latest beta3 under linux and having a problem with TheIDE. When I edit source file(s) in TheIDE and switch to another application and back by Alt+Tab, the scope goes out of the edit window to the lower left part of TheIDE, where your source files are listed and cannot move the cursor in the edit window by the arrow keys. If I move the mouse at this point the scope goes back to the edit window and everything works fine. This problem does not occur when I switch to another application and back by the mouse. It doesn't seem to be a big problem, just a bit annoying.

Scope = keyboard input focus?

What is your OS? (Just checked on my XP - not reproduced).

>Scope = keyboard input focus?
Yes. To explain the problem in another way: when I switch back to the IDE by Alt+Tab, the arrow keys control the lower left part of the IDE, not the cursor in the editor window.

>What is your OS? (Just checked on my XP - not reproduced).
Fedora Core 4

Ahhh Gnome or KDE?

OK, I will check it and fix ASAP (I did not even knew that linux desktop uses Alt+Tab too... but I

am using Fedora 4 as my main linux development platform, so it should be easy to reproduce).

Thanks.

akos

Fix is not in beta4 (I have fixed it 3 hours ago .

It will in RC released (if everything goes well) tonight.
