I found this previous topic about the same thing. But it says there is a descending() function, I could find no such thing. So I just added the suggested OrderByDesc() function.

In Sqlexp.h:

```
SqlSelect& OrderByDesc(const SqlSet& columnset);  
SqlSelect& OrderByDesc(SqlVal a) { return OrderByDesc(SqlSet(a)); }  
SqlSelect& OrderByDesc(SqlVal a, SqlVal b) { return OrderByDesc(SqlSet(a, b)); }  
SqlSelect& OrderByDesc(SqlVal a, SqlVal b, SqlVal c) { return OrderByDesc(SqlSet(a, b, c)); }
```

And in SqlStatement.cpp

```
SqlSelect& SqlSelect::OrderByDesc(const SqlSet& set) {  
    if(!set.IsEmpty())  
        text << " order by " << ~set << " desc";  
    return *this;  
}
```
