Hello Tojocky

Thank you for your effort.

Please next time tell me that you are going to implement code to avoid doing the things twice . I had done almost all this morning!!!

About function naming, if you see class OPENSHEET you will see:

```
class OPENSHEET
{
...
// New functs for next versions
bool InsertTab(String name);
bool ChooseTab(String name);
bool ChooseTab(int index);
int GetNumTabs();
```

These functions are already implemented in Automation.cpp for OpenOffice!!
As I did not implement them in MSOffice I did not make them visible before.

The final thing I am doing now and sometimes is the most difficult is to have just the same behaviour with OpenOffice and MSOffice implementations, as in some things they do not work the same.

Please, believe me. You have done the things well. Please next time tell me you are going to do the job before.

Best regards
Koldo
