
Subject: ToolBar enabling and disabling question

Hello all

Just a simple question.

I want to enable or disable an option in a ToolBar depending in this case if a text has been changed or not.

For a MenuBar it is easy to do it, but for a ToolBar I do not know the way.

I have tried to do it by a Timer function that calls every 3 seconds to `UpdateLayout()` and other functions, but no success.

How can I force a ToolBar to update its layout?.

Best regards
Koldo
