What next.. I guess you will want to have some columns in your ArrayCtrl...

You will need 2 more steps:

1. Create a name for it in your *.lay file e.g. - arr
2. initialize it in the constructor like this:

```
Tab1::Tab1()
{
    CtrlLayout(*this, "");
    arr.AddColumn("col1");
    arr.AddColumn("col2");
    arr.AddColumn("col3");
}
```

Edit:

or

```
Tab1::Tab1()
{
    CtrlLayout(*this, "");
    arr.AddColumn("Name");
    arr.AddColumn("Fed");
    arr.AddColumn("Birthday");
    arr.AddColumn("Gender");
    arr.AddColumn("Title");
    arr.AddColumn("ID FIDE");
    arr.AddColumn("Rat FIDE");
    arr.AddColumn("ID Nat");
    arr.AddColumn("Rat Nat");
    arr.AddColumn("K");
    arr.AddColumn("Available");
}
```
