The problem seems to be somewhere in SqlUpdate:

```
customer customer;
```

```
customer.sqlID = StrInt(sqlData[0]);  
customer.name = sqlData[1];  
customer.number = StrInt(sqlData[2]);  
customer.product = sqlData[3];  
customer.version = sqlData[4];  
customer.location = sqlData[5];  
customer.connection = sqlData[6];  
customer.comment = sqlData[7];
```

```
PromptOK(customer.name); // Just for debugging
```

```
Sql sql(session);
```

```
sql * SqlUpdate(SqlId(sqlTable))  
(NAME, customer.name)  
(NUMMER, customer.number)  
(PRODUKT, customer.product)  
(VERSION, customer.version)  
(STANDORT, customer.location)  
(ANBINDUNG, customer.connection)  
(BEMERKUNG, customer.comment)  
.Where(ID == customer.sqlID);
```

customer.name contains umlauts as long i update the database with SqlUpdate.

Any idea whats going wrong? As i mentioned before, this problem does not occur using upp 2008.1.
