michael wrote on Thu, 25 June 2009 14:11The problem seems to be somewhere in SqlUpdate:

```
customer customer;
```

```
customer.sqlID = StrInt(sqlData[0]);
customer.name = sqlData[1];
customer.number = StrInt(sqlData[2]);
customer.product = sqlData[3];
customer.version = sqlData[4];
customer.location = sqlData[5];
customer.connection = sqlData[6];
customer.comment = sqlData[7];
```

```
PromptOK(customer.name); // Just for debugging
```

```
Sql sql(session);
```

```
sql * SqlUpdate(SqlId(sqlTable))
(NAME, customer.name)
(NUMMER, customer.number)
(PRODUKT, customer.product)
(VERSION, customer.version)
(STANDORT, customer.location)
(ANBINDUNG, customer.connection)
(BEMERKUNG, customer.comment)
.Where(ID == customer.sqlID);
```

customer.name contains umlauts as long i update the database with SqlUpdate.

Please, again, when it gets wrong?
