lets say for exapmle the customer.name contains umlauts like this:

```
Sql sql(session);
```

```
sql * SqlUpdate(SqlId(sqlTable)) // <-- here the customer.name changes to M?ller  
(NAME, customer.name)  
(NUMMER, customer.number)  
(PRODUKT, customer.product)  
(VERSION, customer.version)  
(STANDORT, customer.location)  
(ANBINDUNG, customer.connection)  
(BEMERKUNG, customer.comment)  
.Where(ID == customer.sqlID);
```
