Hi Didier,

Its a greeeeeeeeeeeeeeeeeeat help from you.

Now, I exactly understood the step 3 and 4. And also I hope I can proceed now. But I'm sorry to say that, after understanding these steps, I guess, previously I misunderstood the step 2.

Quote:2- go to the Driver/Input directory

==> here is the code of many input devices (touchpads included)

Copy one that seems closest to your driver and adapt it to your HW.

Would you please throw some light on that step too..... !!! Basically, on the above lines, please.

Quote:NB: all the code written for the Xorg server is GPL since it works at kernel level
So you're driver will also be GPL.

If it is for a commercial touchpad, publish it. somebody else might be glad to find it latter.

I hope someday this driver may be used for commercial use. Right now its just a project for me!
Whatever it is, I'm sure, I will publish it for everybody.

I really appreciate you for lending me a hand.

Best regards,

Siddiquee
