Goodwin wrote on Sat, 04 July 2009 19:04It seems to be I've got the same problem. I was trying to debug the project from "Getting started with TheIDE" by Jan Wilmans and fall in trouble. Building process has been completed successfully but debugging didn't even start.

Well, theIDE's appearance changes, additional panel (watches\locals\autos) appears on the bottom of IDE and message "running" is on opposite. But F10 (step over) does nothing. 'Stop debugging' command causes hang in theIDE so system monitor is only the way to kill theIDE or tested app.

I couldn't find a way how to get over it. It would be great if anyone could solve this annoying bug.

Is it Linux/console app?
