ArrayCtrl looks nice with this grid color - on my PC anyway.

MyArrayCtrl.GridColor(Color(212,208,200));

In microsoft paint, you can set Hue, Luminescence, and Saturation for a color - any idea what they are and how they affect a color.

Graeme

Well, this are alternative "color coordinates". Hue is "pure color", saturation determines "blend" of pure color with white and liminiscence (or "value") is intentsity.

You can use HSV in ImageDes as well...
