How do I compile C++ files in Visual Studio 2008?
I can't figure out where the compile, link, and run buttons are! The only kinds of buttons I can see are new web site, increase indent, debug, etc. but no compile button! I also looked in the "debug" and "test" drop-down menus, but there is still no compile button! Help!

So buy an ad on this forum, if you think this is proper place to advertise your very good product here.

Hello Marey

If you want to be in the donors list you can put some $ here.

If however you want to include some ad. you can negotiate with the web administrator .
