Subject: To set data in GridCtrl's Indicator

Hello Daniel

Now the GridCtrl's Indicator show a thin column colored like the header cells.

In the same way that it is possible to set a text in the column headers, it would be great if a text could be set in the Indicator cells.

This way we could have a more spreadsheet like GridCtrl look, useful in some cases.

I added SetAny (similarly to SetRaw it has access to any column, row but also sets embedded controls and refreshes the cell) and SetIndicator which allows to set text for indicator. Example:

```
grid.Indicator(true, 100);
grid.SetIndicator(5, "Ultimate++");
```

Second line sets text for indicator in row 5. If text is displayed indicator's icon is aligned to the left instead of to the center.
If you need something beyond that please write.

A detail to remember is that SetIndicator() sets the internal row not the visible row.

I mean:
SetIndicator(0, "First row");
SetIndicator(1, "Second row");
will show only "Second row" in the first row.
