theide now got Json and XML viewer - it attempts to views current selection or current file (if nothing selected). Somewhat hidden feature: double-clicking on node copies path as series of ["ccc"][...] useable as "path" for XmlNode/Value.

Assist++ now also emulates methods of S_* types (so far it only emulated memner variables).

Hello Mirek,

It's great news, but you forgot to add titles for the new windows. Here is some additional function calls:

```
Title("JSON view");
Title("XML view");
```

Moreover, fast exit with "ESC" key or another combination seems to be useful (JSON & XML):

```
bool JsonView::Key(dword key, int count)
{
 if(key == K_ESCAPE) {
  Break();
  return true;
 }

 return TopWindow::Key(key, count);
}
```

What I have noticed too is that window has got unnatural size. I enclose examplary screenshot (I don't know the cause of this phenomenon) - It is X11 related issue!

Sincerely,
Klugier

Hello Mirek,

You can also use "smoothen" filter on new ide icons (XML & JSON).

Sincerely,
Klugier
