Subject: Time for a little cleanup ?

Hi,

using version 7357 I tried to build Multilistexample. No luck: #include <MultiList/MultiList.h> couldn't be found.
Nevertheless, Multilist is within the list of maintained packages of bazaar.

SVGView is not, but also not in the list of unmaintained packages. It doesn't build because the interface of ParseSVG was changed. It got a third parameter: svgFolder. If I create one by "GetFileDirectory(filename)" it builds and runs again. But when exiting the program displays a window containing "Fatal error: Assertion failed in ...upp/uppsrc/Core/Value.cpp, line 384 N3Upp11RawValueRepINS_8FileList4FileEEE is not registred for serialization".

Finally a finding of ParseSVG: It is legal in SVG to specify attribute "scale" with one parameter only. In this case the factor is used for both dimensions. ParseSVG ignores such scales but shows an effect only if two parameters are given.

Regards Manfred

Hello ManfredHerr

You may also try PainterSvg_demo.

Could you detail the problem with scale?

Hi Koldo,

I did try PainterSvg_demo. I changed the file demo.svg provided there and appended the path of a treble clef with transformation attribute "scale(4.0)". See appended file. Try it with PainterSvg_demo and see it displayed without scaling. Load it into emacs, for instance and see it displayed with scaling. Then change the attribute to "scale(4.0,4.0)" and PainterSvg_demo will display it like emacs.

Regards Manfred
