What is new in version 1713:

theide:
* .t files are now saved with strings converted by escaping >127 characters (and back on loading). This fixes venerable problem of UTF-8 string literals in CJK Windows and MSC compiler.

CtrlLib:
* TreeCtrl InsertDrop now returns ids of inserted nodes.
* A new set of utility functions that simplify selecting files introduced (see http://www.ultimatepp.org/src$CtrlLib$FileSelUtil$en-us.html)
* HeaderCtrl columns now can have a tooltip
* SliderCtrl now allows reversed orientation (thanks avpavp!)

RichEdit:
* New much more effective speller dictionary format, utilities required to convert OpenOffice speller dictionaries into U++ speller files.
* Labeled paragraphs now marked with arrow displayed in the left bar.
* Previously private StyleManager class capable of managing paragraph styles has been made public.

Report:
* New methods ChoosePrinter, ChooseDefault printer allow selecting printer BEFORE report is created, setting the physical page size based on choosen printer.

Core:
* In Win32, console applications no longer pop up a MessageBox when panicking, instead they write the panic string on the error output and terminate.

GridCtrl:
* Multiline popups now allowed, using GridDisplay to paint the content.

Bazaar:
* New functions to SysInfo
* Urr - UDP request-response protocol added

Download it in http://code.google.com/p/upp-mirror/downloads/list

SpellerDictionaries
New folder /SpellerDictionaries has been added in http://sourceforge.net/projects/upp/files/
It includes new speller format ".udc" files.
