Hello all

Sometimes we need to show rich text but it is not easy to code QTF by hand.

Just the simplest trick is to insert in a Topic++ group a new topic with the text, pictures, tables, ... arranged as you like. To get it you only need this line:

```
String qtf = GetTopic("topic://MyPackage/MyTopicPP_Group/MyQtFMessage$en-us"); // Change  
en-us with the used language
```

If you need to insert variables, you can set fields in the topic like [MyField] and after that do a:

```
qtf = Replace(qtf, DeQtF("[MyField]"), "My value");
```

This string is QTF so you can insert it in a Exclamation() a RichTextView or set into a Report.
