There is a mistake in definition of DayName definition (DyName too)

Original:

```
String DayName(int i, int lang)
```

```
{
    static char *day[] = {
        tt_("date\\vSaturday"),
        tt_("date\\vMonday"),
        tt_("date\\vTuesday"),
        tt_("date\\vWednesday"),
        tt_("date\\vThursday"),
        tt_("date\\vFriday"),
        tt_("date\\vSunday")
    };

    return i >= 0 && i < 7 ? Nvl(GetLngString(lang, day[i]), GetENUS(day[i])) : String();
}
```

New:

```
...
static char *day[] = {
    tt_("date\\vSunday"),
    tt_("date\\vMonday"),
    tt_("date\\vTuesday"),
    tt_("date\\vWednesday"),
    tt_("date\\vThursday"),
    tt_("date\\vFriday"),
    tt_("date\\vSaturday")
};
...
```
